

Basics of HACCP

August 24-25, 2021 • Bismarck, ND

Hazard Analysis and Critical Control Points (HACCP) training is required by USDA-FSIS for its inspected facilities and many food manufacturers and wholesalers require their suppliers and vendors to have a working and audited HACCP plan.

HACCP is also required for most advanced third-party auditing schemes, including SQF.

Basics of HACCP is an interactive, two-day course. Upon completion, participants will receive a certificate from the International HACCP Alliance.

The Big Payoff for Supplier Scouting

Supply chain issues can be daunting, but U.S. manufacturers that want to locate domestic products and capabilities can find much of what they need in the U.S. Not only can you reduce your risk of supply chain disruptions, but you can benefit from expanding your network, gaining market insights and tapping into expert advisors.

Cyber Hot Topics: Ransomware

In response to the pandemic, many end-users are now working from home instead of commuting to their business locations. Homes are being used as business offices, and computers and networks are being shared by family members. Families are taking classes, doing homework, and surfing the web in addition to performing business functions.

The data created may be stored locally or in the cloud. Backups may not happen until the device is returned to the office or the end-user manually backs it up. This new environment is ripe for cyber attacks.

Manufacturing Day — What Do You Have Planned?

Launched annually on the first Friday in October with events that continue throughout the month, MFG Day helps show the reality of modern manufacturing careers by encouraging thousands of companies and educational institutions around the nation to open their doors to students, parents, teachers and community leaders. MFG Day empowers manufacturers to come together to address their collective challenges so they can help their communities and future generations thrive.

How Smaller Manufacturers Can Take Advantage of Additive Manufacturing

Additive manufacturing is the secret weapon for small to medium-sized manufacturers who create highly customized products and are looking to improve their industrial tooling processes. MEP National Network representative Dave Pierson shares how for shops interested in producing more high-value, low-run parts.
